

Fundamental Reality (1) (Cut-Version)

Fundamental Reality is a series:

- (1) Third Dimension (Universe)
- (2) Informationing & IMP
- (3) Evolution Blocker
- (4) Language Defining
- (5) Future of Medicine
- (6) Individual Integration
- (7) Future of Society-System

**Papers by Ingo Bank (IVH3), The Isolation Artist,
founder of the Internet-Saferoom ViMoSA
(The Virtual Musuem of Survival-Art, Anti-Discrimination & Science)**

Preample

It's all easy! WE are meant to understand and solve for example cancer, we are meant to have way better engine solutions without polution, and we are certainly meant to have better society solutions, we are not that far away from everything and i got some keys here for you, WORLD.

U-Keys

Third Dimension - Fundamental Physics, incl.:
Paradox-Perfection-Theory (aka Black Hole)
Matter-Relativity-Theory (IMPORTANT)
Time, Sound- & Light-Theory (seperated)
Fadesciousness and Dream-state (reality)

I-Keys

Information-Mistake-Prevention (IMP)
Metabolisation-Chain-Reaction-Theory (CT-/C-MC) - MED.
Ending Evolution Blocker = Psychology (That doesnt nessesarily mean "ending psychology", but ending the BLOCK to evolution, by teaching reality.
Absolutely ending pathologisation!
BEGINNING OF INDIVIDUAL INTEGRATION!

Seperation of important & Unimportant KEYS:

Intelligence would never jump over a simple everlasting task and continue with other tasks for personal gain - While paradoxly: solving the jumped task would be the highest achhievable personal gain. Another word for that jumped task:

"YOU"!

Now about me...

I was made by a heroin-addict.
22 years later I was sleeping on the streets -
as the jumped task i was supposed to be for life.

I am probably the first ever theoretical scientist arose in nothing but: poverty, degradation,
discrimination and pathologisation - That took my life.

I am...

Soul

People who like to know more about me or like to read in general:

are free to read my book "Evolution - Imperfect", available for free at
www.theisolationartist.com/eggy-movement. Reading it, there can be discovered
information to "Fadesciousness" and "Evolution Blocker". That book is information-art as
well, a huge creative hidden encyclopedia to wisdom. You will learn about anything
important, anything i ever learned helpful in life, it provides almost any answers a human
being can seek and beyond.

Safety-Instructions

I can be humoricious.

If you find words with a little "r" upfront, then you find a little "r" upfront.

The informations of each paper of the Fundamental-Reality-series can interconnect:

If a theory isnt published yet but refered to, then pressure me!

If any paper becomes stressfull, then just leave it, no big deal.

prevent brain-overactivation:

Which it could never do for me, since i was born this way (as you will learn of my first school certificate i quote in this series).

Thinking can be a sport and I always was and will be an extreme sportsman - But...
with a lot of heart!

My dream of societys

The few human beings privileged by nature to understand, they only have to define/redefine a save society-base - made for the people - once, only once, and societys can only naturally build good on it. If the base definition is good (for example transitioning from Entirely-Negative-Psychological-Labeling to Temporary-Positive-Label-Solutions - part of Fundamental Reality (3), or individualizing Blood-examining as described in Paper (5), as well as in Society-Redefinition-Principle of Paper(7)), then system will be good for everybody.

System was nothing but a nightmare for me, it shell be prevented for other innocent lifes.

I love intelligence, it was the only help i ever had, and i always found a way. But now, here, I do that for a higher purpose, for you. I would rather be the small integrated supersweet-artist enjoying living in that world described above. But that will never exist without people like me, so i sacrafice myself, if that is required, and take the risk of coming in too hot - But i cant help it: i am very attractive man!

"...humouriscious"!

**Jokes aside, i take the risk, so that people in the future can just enjoy this dream:
being a being on a flying ball in rinfinity.**

Now fasten your seatbelts!

Even though this is a "U-Key-Paper", it is still very exiting to share this now for the first time ever! This is rock bottom societys great moment, the rise of the weak and outcasted, of the lost, the ignored and forgotten! The Moment in history of devided humanity that is restoring reality.

Table of Content

What a bummer the Table of content after that "speech" right? But it's gonna be mindblowing!

SEE PDF LINKED

One last sad thing

There are no 3D-Glasses for the third dimension.

Ok Let's go!

1. Building up understanding for the Paradox-Perfection-Theory (PP = former called "Black Hole")

As I said in the very beginning: "It's all easy!"

But it's going to be a a difficult way of presenting "easy" to you. All knowledge is interconnected and I will build up a lot of theoretical understanding, before I will even get to the physics of the Paradox-Perfection.

1.0 How is logic defined?

Logic defines logic as the final solutions any information-adaptor (brain) naturally aims to reach. It's not me defining, it's logic defining itself. Like a stair to a shiny door: on the second step you get a science-price and by that stop moving? Who wouldnt walk just one step further upstairs? Only a blind person never even seeing a mild shine. But an actual blind person would see that light! It's logical that noone can ignore light of 100%-ensured-higher stages of everything a brain can seek. Noone could or would want to resist that light, like a little child naturally needs its parents and will not just chose to walk away from them - without any trigger - to be alone for life because another child found a sticky candy-bar! A child might be interested in the candy-bar, but no matter what, in the end it will cry non stop for the parents, feel absolutely lost and alone and endangered if it cant be reunited. A brain not moving into the save shiney door would forever think of that every day, and actually... just walk inside of course.

If you have, or will ever witness a person who walked in that light, you would/will know...

1.1 "Before" "The Big-Bada-Boom"

Did any big banging theorizor ever start before the start of everything? They maybe start geniusly stuff like "first there was nothing..." NOBELPRICE WORTHY! "First there was nothing" - And that's it: one sentence about "before", which intends to inform someone "there was nothing", while ironically contradictingly still submitting by that information that will be understood in 100% of all submitted-tos (subconsciousnesses) as "ALOT" - Nobody knew Information-Mistake-Prevention! (As i said: papers are interconnected.

Where would we be if we would pretend to be "there", before the big-bada-boom?

For this kind of fantasy-pretending we need to ignore logic for a moment, because there is "nothing" we could be in, no Third-Dimension-Information. We would need a Third-Dimension-Bubble which even couldnt be there, because "there" is "nothing". But "there" is not "nothing" because "nothing" is something!

It's important to understand Information-processing in general for that: If we as human want to describe "nothing", it will still always be something, because our brain connects nothing with A LOT - For example with: "no light", "no matter", "a lot space, or emptyness", and even the word "nothing" is a label that has got a lot information in every letter and a strong meaning as a word.

To make it short, I would want to say about what was (and still ris) "before" the start of our Third-Dimension: "It is primitive to even try to explain something which is beyond any information our Third-Dimension provides". But even this explanation would be too much!

Silence, no thoughts about "beyond third-dimension", giving even up the intention of explaining + letting time pass + moving on and forgetting about: that would come close to what I am trying to say. By losing any relation in the brain we would create something close to "Nothing" < while there you already lost logic by "we would create", because it would have been a plan, that will forever last in the brain, with a lot of connections!

But right now you are not thinking about many billion possible things - tell me about one of them. Now a search would start - for what?! But the very second before, it was the absolute closest to "nothing". STILL it would be "something" compared to what I am really trying to say. Maybe you see now that's impossible to understand what was before.

But i still do!

Because there is an **incredible mind-trick** to get beyond our Information-limits: It's a trick, a paradox, because it stays impossible but here we go:

1.2 Understanding the not-understanding

This might seem easy, but without what I've just explained above: all the building-up-connections to that understanding will be missing, the logic, the birth. It's easy to absorb the information of me trying to explain the mind-trick, but it will never be born in your brain. And that birth-metaphor is beautiful: logic is truly like a mother, while information absorbed without mother, they will feel like any person without mother... screwed! While my Informations are gently shaken save and sound for ever by mother nature, reality - save.

Without one's own understanding-breakthrough, birth, information can't ever be a save-information unless there is TRUST - And I write about "the science of trust" in "Informationing & IMP" - Fundamental Reality(2).

I split the papers because it was first called "Fundamental Everything" and way too huge for people just interested in "Black Hole": they would have had to read a lot before reading the fundamental-building-up to the Paradox-Perfection, and would have burned concentration, maybe developed certain-emotions because... my papers lead to understand how information (language) is being used so far, which includes to seeing the abuse... I don't intend that, but it's real and the world reflects that abuse anywhere you can possibly look.

But we get a second chance right here!

Missing the "Science of Trust" of paper (2) - besides that you can read any required part once they are all published - is maybe not that bad: this way you don't read about trust as something to learn to understand... get it?

All you need to know about trust, as "adoptive-mother for information", is: in case of the absence of trust people need prove!

"Prove" can never be an adoptive-mother for information, only individual own personal trust can, a feeling arose out of oneself, not collectively implanted as "proven" - by people making everything they do true and right by the power of integration: never doubts, never human, just "perfect" - at least on paper, which is how system dooms everyone to go along, by teaching and forcing to use language that doesn't have a mother yet! If language will be safely defined with IMP, then mother will take care.

... Jesus that metaphor! Like 1.0, mother nature, finally!

1.3 Summery of building up to the fundamental reality

2. Thinking about 1. was not possible because there was and is nothing but the red-market-hint about it now, but before you just started reading 2., just skipped the 1.: that's close to "nothing", to what was before the big-bada-boom in the "beyond-our-3d-info-area", which i will give a name in a second.

3. Any absorbed information cant ever be really save for someone unless born in oneselfes mind, but still find an adoptive-mother by true trust, not implanted integration-power-collective-trust, and on top: open up the way to logic, the real mother prioritizing nature and by that paradise - Nature doesnt do mistakes. You dont go to any of the incredible beautiful plants and beings on the flying ball we call Earth and discriminize them for how they look and what they do, no, we are faszinated and watch them repeat peace.

4. Addition: Logic will always connect to paradoxes. Paradox-principle is the base of our third-dimension, the ultimate key.

Now... physics!

2.0 Paradox-Perfection-Theory-Drawing

This is the original drawing from early 2015!

You may wanna take a short moment to just look at it, think about it - Maybe you discover how logic solved 1.

Explaining it all on the next pages

2. Paradox-Perfection-Theory

2.1 Task: Interesting fact about the information-connection "Paradox-Perfection"

Before you even know that PP is the key to all understanding of the third dimension, you could wrap your mind around the word-combination itself.

Did you wrap? Maybe you came to the conclusion that the word "Perfect" itself should have been erased from language, since nothing is perfect, not even in fantasy - that can create a planned or implanted moment of perception, like of "the perfect lovestory", that cant last in fantasy unless time would be erased, stillness created, that would freeze the lovestory and by that end it. If the story would be architected to continue for ever, so that nobody of the loving ones ages, then the human being experiencing the fantasy can still only have a moment of perfection-perception. True perfection could only exist when time would end while still everything continues - And that would be _____? For me it's very interesting that thinking of the logic behind the information "perfection" leads to to word that leads to the birth of "perfection". Only these two words combined are perfect. Paradox-Perfection even without "labeling" "something" with, is the greatest possible information discovery itself, not coincidentally the key to everything, the base of the third dimension and everything within. So i didnt label it...

2.2 Paradox-Perfection

The PP is the connection-point between two different "worlds" (1. Non Dimension and 2. Third Dimension) which paradoxly works perfect to two entirely different law-sets at the same time (1. NoD-Laws and 2. 3D-Laws). The Paradox-Perfection logically doesnt exist since - out of 3d-perspective - it has got an information killzone that deletes all 3D information, which means it should delete itself, yet it "stays" because it's the anker (3D-Glue) for the space around, that is also existing in the Non-D world that is not existing for 3D-information-based beings, only logically with that mentioned mind trick (1.2): "understanding not-understanding".

2.3 "PP-Building" (aka "Big-Bada-Boom") out of the Non-D perspective ?

This perspective, in visualisation, can only be **made up fiction**, since I already explained that noone can understand "nothing" or what's "happening" beyond 3D-Information. But the 2.0-drawings Non-D-perspectives Part-Dimensions (PD) - which came up in the heat of a historic exiting moment of a young artist - are still not that super-unrealistic, considering "building a globe" and why there are poles and magnetic fields. But even if visualisation of that Non-D perspective cant be ever correct, it doesnt matter when we are changing the perspective to our Third-Dimension, and by that to unfaillable logic.

2.4 "PP-Building" out of the 3-D perspective = "Bada boom, big bada boom!"...

... if someone is there to absorb Information.

And better bring an extinguisher for nothing but liquid RMatter and RGas in fire.

Phase1: The liquidness of everything at the "very beginning" (which is relative, since nothing could ever start before you were alive), is fundamental important to understand all following.

MPP = Mother Paradox-Perfection IKZ=Information-Killzone

2.5 PP-Building Phase 2 - after time: Beginning of RMatter

MPP= Mother-Paradox-Perfection RMatter=Relative Matter

Rinfinite space-overlay, rinfinity PP's sucking liquid **RMatter & RGas** to form globes (while still expand further from MPP)

3. Laws of the Third Dimension

3.1 Base Laws:

B01. ...

B02. Information Limitation (Rinfinity): Infinity of Informations are limited to the third-dimension. Rinfinity (former Infinity) will always have this limit. Infinity from now on has no limit and can only be used in sentences about Paradox-Perfection.

B03. Everything expands and spins

3.2 Main laws:

Law 1. Relativity of everything / Paradox-Perfection = fundament

Law 2. Spectrum of 3D Information (Spec-I) = everything inside the third dimension: chemistry+physics, atoms (made of rininit parts) and their various R-connections (Matter-Relativity-Theory follows), as well as traveling signals like sound and other waves, and of course "light" (More to Spec-I in Paper 2 - Informationing and IMP)

Law 3. 3D-Information & Interactions are regulated by math-principles (only PP could escape), imbedded in...

Law 4. Rininit overlay of expanding three dimensional spaces, where information can travel in scales, while giving RMatter & RGas rininit space-anker-points (PPs). This shared ultra-overlay is not confusing for any information because the "Big-Bada-Boom" created a "motherspace" for any informations already there or to be - plus a scaling principle (RPSP) i will get to soon. The motherspace is like any humans brain shares this mother-dream, instead creating entirely separated dreams (which they kind of still "do", but you know what I am saying here).

Law 5. Everything in the third dimension is a third dimension. RMatter (even RGas) can't form something other than globes. Everything optically "not globe" is made by collision and still made of nothing but sctstructure of perfect (R)globes! It's absolutely impossible "to take 3D-space apart" without creating 3D again. But...

Law 6. Information-adapter (brain) absorbtion-limit: logically there is no limit but the base-limit to absorb, yet...

Law 7. Rinfinity Priority Scale Principle changes physics/mathematics/regulation. RPSP hides information. Without RPSP every scale (zoom) would crush the scales inside by forces/Energy. Everything in the entire Third Dimension would be just a chain of neverending destruction (explosions).

Law 8. ?

3.3 special Laws:

Jay-Law!

Kidding. It's: Lifeforms have acces to special information we call Emotions, which have special effects on lifeforms.

3.4 Gapey-Information:

Light, Sound, Time (follows)

4. Matter-Relativity (law 1 specified)

I understood Matter-Relativity in 2014, way before the Paradox-Perfection - Without that: PP can never be understood. "Not-existing" is a logical key to the key and shifts to: rather understanding space, the "everything" instead of what gathers in this R-space. And after [law 1+6](#): Any point of the rinfinite space overlay needs an infinit-force (not relative = not limited to 3d-limitation) in the center to keep any space together (= PP). Which means: imagine the entire Mother-Third-Dimension - that resulted from the Big-Bada-Boom - as "space without matter", and every single point of that ultra huge rinfinite space has got its own PP in its center - Which makes PP The only thing existing, but "relative" since it is working to law 1 of course. If its there or not for an information-adapter (brain) depends on the RPSP (follows).

4.1. Matter-surface-disapearing-principle (MSDP)

~~~~~ < This respresents any matters surface, if skin - like someone can lay a hand on naked swetty round area of someone hyperventilating, saying "good job baby" (No, this is just your perverted imagination! This is: a men wearing a tank-top, who just layed down the hantle ending a very heavy set, when his boyfriend touches his mighty R-shoulder saying "good joob baby!") - , or if you touch a long wooden board, or flat vibrating metal of achses, or a cock, beautiful colourful cock-feathers printed on top, any matters-surface has peaks and lows due to atomic-/molecular-structures and space = **nothing is just flat** - exept of my gags. When you touch for example a seemingly "abolutely flat" polished surface of a wooden-table, you WOULD still only "touch" the peaks of the wood-structure. But if we would zoom inside: between your hand and that table, even if we'd zoom directly to the peak-points you seem to touch, it would show the same priciple of surface on top of the peaks ~ ~ ~ ~ ~, just with even more space between. The peak you thought to "touch" will be related by the now occured "low-points" you cant touch, relating the-already-to -50%-peaks-reduced-peaks to just touching 50% of them, while even your skins surface now is that much zoomed, that the same principle is occuring there, even reducing contact further - exponentially. We zoom in again at that "exponentially-reduced-peaks-surfaces-peaks" you seem to touch: ~ ~ - same principle, way more space between structure. Every following zoom will show the same. Logically it's 100% impossible to ever touch something - And by that: **matter doesnt exist!** And B01 says...?

### 4.2. But "dont worry"

It's only clarifying what we really are. Because I already mentioned something you probably didnt see, because you been too busy still wondering about the hidden implied story of me still missing sports, instead of letting the planted information-seeds turn into tears at the green-marked point of history, where was prooven by logic - which again is highest possible prove -, that we are: free beings, not even traped in a manifested body, as people often say or write. Our body is not existing, not even atoms ever touch each other while connecting. We are free third dimension beings never touching each other, we only absorb and feel each other, "touch" our souls!

## 5. Mother-PP or Mother-Sun?

Everything is always spinning around a PP... or sun?! You might wanna take another look at my [2.5 drawing](#) "Phase 2 - After time: Beginning of Rmatter on page 11". There is the very same principle we know from galaxies having a sun in the center. I couldn't call it sun, because no matter what, the center will be the Paradox-Perfection, even if "state of sun" surrounds it.

### 5.1 What is a Sun?

Liquid Relativ-Gas still hot enough for being in the early fire state, even if very r-old. If no R-Matter-base is gathered around the IKZ of the Paradox-perfection in the center, any sun will one day explode to RGas, then cooling, leaving a "visible Paradox-Perfection", the center of any galaxy and more importantly center to the overlaid bigger space-globe < this is the real deal! But yes, the Mother-PP could be at this time surrounded by a HUUUGE HUUUGE sun. And I am not saying "could be" due to speculation, but because it's both possible, it's either at the moment a Super-Mother-Sun somewhere still so far away that it can't be absorbed, or it is a Super-Mother-Paradox-Perfection after "sun-explosion" depending on temperature related to its individual scale. It is a PP no matter what, if surrounded by Light (Sun), or not. And logically it must be further away since everything keeps expanding from the center - Which is interesting to understand even more that all we are able so far to absorb of the entire Third dimension is so far either under 50% no matter what, since we are a point, the SUPER-Sun/or-PP would be the middle point and there is equal space expansion beyond - or, we cannot absorb it ever by the Information hiding Rinfinit-Priority-Scale-Principle, that scales light, ray and temperature that would instantly end us, since that MPP is the ultra giant. I am convinced it's still in sun-state and we are in such a super tiny scale that we are "close" to it. To understand that better, imagine a galaxy as an atom, that has got billions of other atoms to even build a tiny dot of a body, as we have got billions of atoms in ourself. If we would zoom into our warm blood-stream it will not have this temperature after a few scales of zoom, as well as it won't be even liquid. Without RPSP physics would naturally result into a chain of rinfinit destruction by magnetic forces and heat. The MPP would simply burn everything. We could be even in the super heat of the MPPs outer fire that now surrounds the, for us furthest absorbable space. It's hard for a human brain to understand rinfinit, ever-ongoing scales: zoom, and zoom, and zoom, and zoom, and zoom, smaller or bigger, doesn't matter, zoom, and zoom, and zoom, for ever and ever and ever and ever and ever - Of course we can be in some superzoomed part of the ultra suns heat/light-layer, that for us appears to be the "huge" third dimension with billions and billions of galaxies and lightyears of space to "travel".

**So don't expect light to be found outside of your mind. If you want to see more, close your eyes.**

**But don't close them, this is all unimportant! Open them for problems in our reality.**

## 6. Rinfinit-Priority-Scale-Principle (RPSP)

When you would journey to the center of the earth (ignoring pressure and everything for that adventure), you would never reach the real center, because, as you now know: The 1. law relates everything, followed by the Law that overlays everything (space) which is only possible by never having a point to collide with, which is ensured on top by Matter-relativity: nothing has a touching point or center to ever physically reach, while PP has to "exist" in any point of all rinfinit third-dimension spaces.

What they say "in the center of the earth is a core", is 100% made up, assumed and sadly written in countless school-books, while there is really nothing to prove that ever, not even logically - At least not without this paper. But even with it, SPECULATION about "what is deeper inside the earth's structure" (most likely a tiny sun, maybe wouldn't even be visible) can only be appropriate as fictional fantasizing of writers, or curious people, but not as manifested teaching version. "THIS IS HOW IT IS" they say < should be a crime!

In the earth's for-center (surrounding the PP) will be LR-Matter-or LR-Gas-Sun, depending on which atoms (in early liquid building phase) been sucked toward the PP of the related space-center - That's the furthest speculating I will allow myself and based on the following logic:

**6.1. In the globe building phase, aka "the heatphase",** where LR-Matter was bada-boomed and then (you gotta really think big now) got sucked back from 360 degree toward the related space-centers PP, trapping whatever atoms between the LiquidR-Matter and the related IKZ, starting to build the globe, there was no escape for the atom-layers that been created, no sorting out - Because any PP, in whatever atom, responds the same to gravitation caused by the bigger PP's gravitation of the globe-to-be. If RGas (which is made of atoms which have a PP in its center), or RMatter around: any atom will get sucked back to the bigger spaces centered PP with the same speed. This is why inside planets 100% logically can be anything like: gas layers, water layers created by the cooling down phase (LONG LONG cooling-down-phase), ice, and whatever else to pointlessly speculate, and so it created and creates individual planets in size, in composition, but never in shape since the force from the center (from PP) is always absolutely the same 100% density, 100% information-delete that would delete itself while paradox-perfectly still existing and keeping space together as anker! That's why planets are so different.

And, during building phase, if there was hot hydro-connection-containing-gas-layer "on top" of the furthest sucking-PP-related layer of Liquid-R-Matter, then by cooling down: oceans of tears dropped! Like you do now!

Whatever at that time at the further-gravitation-range RGases/-Matters are present, would have responded to any "nearby" PP's Gravitation < if stronger (bigger PP). And everything appearing to be "just space" (which is never empty), is responding by math principles to a "zoomed-in-version of the same globe-building" exponentially at any motherplaces points (infinity PP's), while getting still sucked to the layers PP, yet still staying unaffected the layers-globes heat or collisionpotential with anything flying nearby. I repeat: It means even "space" between LRmatter-Layers and LR-/Rgas-Layers, will perform the way the 3D-Laws are defined, but still respond to the gravitation of the Layers related PP without, for example in very heat layers, getting affected by layers heat. Infinity has to PRIORITIZE math principles exponentially in order to ensure infinity.

**Anybody understands RPSP??? This is high-end-stuff here, I told you "it will be difficult to bring easy to you.**

**6.2. Okay easier:** Imagine traveling a million lightyears away from our planet, to a gigantic paradox-perfection, and from this one we travel 10 million lightyears in all 360degree directions to create a space around that giant-PP, then imagine around the outer range there is a ultra crazy hot layer of Liquid-RMatter half the size of the entire space we created (5million lightyears), burning everything, and yet we (planet earth) stay unaffected even though we are almost in the center of the heat...

**Admit it, this one WOWed you!**

Because even if my theory about LRMatter- and LRGas-Layers in **EARLY-HEAT-PHASE** would be off, and even if the imagination of the wowed-you-fire-layer above is really super off, still the **Rinfinity-Priority-Scale-Principle (RPSP)** leaving areas unaffected by 3D-LAWs to ensure the very same 3D-LAWs for a smaller scaled system, is nothing but genius (I mean the nature, the nature is nothing but genius).

## 7. Later-building-phase of 3D, but Early-Building-Phase of Earth an Magnetic-Log-In!

Earth started crying because of very-lucky outer-hydrogen-layers that could cool down, but something else already happened: Poles been created by the entire RMatters atomic-energys response to a huge magnetic-fields ring created by the related Galaxies PP in the sun-center, Earthy has no choice but to log in on that rinvisible "Ring". It's absolutely logged in, no more traveling towards the Suns-PP, but speeding his first rounds round the block, while spinning and constantly catching sun [ example for Paper 2 IMP(Information-Mistake-Prevention): Sun doesnt rise. I will talk about superficial fundament of our use of information/language in Paper 2].

Earth travels it's early rounds, constantly reheating, recooling, always gasing and mixing with an even more lucky composition of other RGases that were luckily gathered by the planets-PP's gravitation just close enough to the surface, ultimately leading to create an atmospheric shield. Rinstantly followed by beings, that were lucky enough to have huge early state amounts of clean atomic-Rgas-fuel for even hundred meter high living Carbon-cell-gatherings - Yes I am talking about Jurrasic Park (while life must have existed long before)! Then millions of years traveling around until suddenly... Collision! Almost the end of cool-earth by an even cooler earth (ice age) and by that any further incredible life-forms to come! **But earth made it, because we were meant to be!**

**I meant us, humanity! Dont bring her up again, I am over her !**

## 8. Addition to 3. Law 8. Letting go Law!

## 9. FINAL PIECES - Part 1:

**Space-curve? Whormhole? Trend! Scalejump? Scale-shift (Drug?), Time.**

### 9.1 Space-"curve"?

I havent absorbed many of these "scientific"-videos. There was this one Physicists videos I watched around 2014, when I wasnt even understanding english good enough to follow. But my goal was exactly the opposite: not focussing on anything! I used it as background noise, to fall asleep. And not-understanding the language helped me. (More about my life-long-insomnia at the end, when i will talk about "dream"-reality). So I didnt learn anything from that, and didnt knew I could solve all this myself by just starting to really think about it. And then 2015, there was a single short videoclip I watched, after my extremophile evolution kicked in, leading to me never wanting to see another science-video again - And I didnt see another, its all off-reality.

**9.1.1 This is what a Professor taught students and by sharing online many many million people about gravitation and space curving.**

**You might wanna take a moment to stare at this elastic fabric,  
curved by rolling balls.**

**Homeless guy disturbs the class:** "Yo man! If you make the yellow ball saturn, it's ring will slice your crazy space-version and the entire third-dimension goes to shit!"

**Prof.:** "The what goes to the inappropriate word?"

**Homie:** "63-million brains!"

**Prof.:** "I think you spend too much time under the free sun my friend! I have to ask you to leave or I will call security!"

**Homie:** "Don't worry... I will leave and continue to be alone for the rest of my life. Thanks for calling me your friend, was the best experience I ever had with a system person! But can I have your balls please?"

**Prof.:** "What? Oh... This is university property!"

**Homie:** "Damn! But that's why I came for! Someone said "you gotta have balls to sleep out here!". And then he kicked me! It was my home! Now I need balls or can I sleep here? I am tired from society and this blue giant condom looks very cosy!"

**Prof.:** "leave! You dont belong here!"

**Student:** "Professor, this stranger may deserve a nobelprice! Because he is right!"

**Prof:** "The only one right here is your mother!"

**Alrighty! The end of the conversation is telling us a lot:**

The Professors wife, the mother of his son (the Student) was right! She said, while sitting in their huge villa at a huge diner-table with 10 relative huge but very successful family member: "Son, you should become member of the comitee, we have a seat open since grandmother Eddisons invention blew up her seat".

**Son:** "What invention?"

**Mother:** "She integrated a toilet in her seat, which was supposed to open a portal for the... you know what".

**Son:** "But instead it exploded???"

**Mother:** "How can I put this... It was a shitty invention! Pardon!"

### **But now the question is:**

Did the Prof admit the Homie was right with saying "The only one right here is your mother!", which would have supportively-strengthened her included opinion about their son "being the right one for the job" - which he now proved by his seemingly competence, when finally deciding, after minutes of silence and playing with balls, that the distracting beautiful Homie was right, while still respecting his parents with saying "he MAY deserve a nobelprice", letting the final judgement open to them - or did the Professor try to get rid of his son as his student?

**We will never know, because not many people are really aware of what they are saying... or doing.**

**At least we now know what we already knew since all in this paper:**

### **Space doesnt curve ever, it's made up!**

**9.1.2 The only area the infinit-overlying-space could "behave" different** as just being overlying-space, is the Information-Killzone (IKZ), which is killing information toward no-"behavior"-at-all, because something can only "behave" when affected by laws of the 3D, and after IKZ is Paradox-Perfection.

**9.1.3 "Space-curve" would not even be possible at the edge of the rexpanding Mother-3D**, like for example: when a fictious artificial force directed by man would try to push the Mother-spaceglobes-edge beyond globe-form, then "on the other side of the edge" would be NON-D nothing can curve into and the force would just vanish because: the force, as crazy advantages in this fantasy as it could get, would still also be 3D-Information. That means, if the mother dimension would really expand, then at the edge would be an information-killzone as well, but it never started to expand because of the real **the base-law B01 i left open to reduce confusion: Nothing exists!** (but humanity can and will alternatively build on "everything is Relativ"). From our perspective every space is expanding. From the Non-D-perspective (one can only "have" with the mind trick "understanding not-understanding") nothing happens - There is "just" a Paradox-Perfection! That's why it's called like that, because it's the only "thing" that can perform to the laws of both "worlds" at the same time in perfection.

**9.1.4 Even the appearance of "curve" by magnetic-fields respond to the former explained Rinfinit-Priority-Scale-Principle (RPSP).** The RPSP makes sure that even when we push two superstrong giant magnets towards the same pole, with sure hell of a power to get them together, but we succeed and they touch - because we pretend not knowing by now that nothing ever touches -, then RPSP still ensures another scale to work unaffected in between that appearingly closed space. Trust me, the magnetic forces a-trillion-times-bigger Galaxys around us create, would crush us instantly, if we werent saved from that by RPSP, while there centers (PP), gravitation(s) might still influence our scale - but this is speculation - i dont like. I cant understand this: understanding scales is impossible, it's an rinfinit exponential multiplier to rinfinit, while on top we cant even absorb most scales because they are hidden information by small-and-huge-sizes-we-cant-even-begin to-imagine... Anyone following? Gapey!

**9.1.4.1 It's very important to differentiate between artificial-man-made-magnets and gravitational-magnetic-fields**, that are always part of Galaxy-systems. So man playing around and trying to recreate a version of Reality not understood in the first place with magnets, or whatever, atomic-nascar, will never create these 3D-system-related-forces.

## 9.2. Whormholes ("Trend") VS Scalejump!

This is Trend, you can find him in the Ingopedia politics room, he is the longest and most stable member. But he is also stuck in science.

### 9.2.1 But what in the hell is Scalejump?

In a super-duper science-hardcore-fiction fantasy - still not close to whormhole-fiction-level - man could maybe somehow jump from scale to scale, which would mean for example: Mankind inside a spaceship would not move, nothing would grow or become smaller, but the information-pool around would swap from one to another scale and now hide the scale mankind were living before. So the scale changed and earth would be for example 10 million lightyears "away" while still at the same place where the spaceship would be at, just not absorbable/messurable, now at a super-small-scale (while nothing changed size). Of course it would be a super lucky attempt with a risk to be instantly burned by a sun of the now new scale, a sun we were kind of living in before in our scale but couldn't see or measure any data about, because scales have "hidden"-information and save our existence.

### 9.2.2 Freeby for science-fiction writer: "Scalejumper".

**Should I add "Scalejumper" to VIMOSA News&Infos room "All my free offers", where I offer also book-ideas? For now I am too busy to work this idea out, but sometimes a title is enough, at least for me, that's mostly how it starts. If you go with "Scalejumper" you have to invent something logical to jump scales - You will fail. But did I fail?**

Do you still underestimate me? Scalejump is impossible, only I have partly access to hidden information with mindtricks - which is good, we could not exist a second if we had physical access: everything would explode in a bigger explosion than the big-bada-boom because the bada-boom went down under the laws of the third dimension, which is super interesting because: in comparison to impossible-scale-bada-boom, the first so-called "big bang" was a sweet tiny dimension-collaboration-"pewpew" exactly because of RPSP that made sure not much happened in small scales where it cooled down and built life within the first "second" of the ultra-super-fire-liquid phase that lasts millions of years out of our perspective toward the Mother-PPs space. Out of the tiny scale-perspective with our time-perspective: the big-bada-boom could have started a second ago, a second we call 13 billion years. Is anybody understanding anything here at all now?

### 9.2.3 This is time! Scale-shift (Drug)? And a Giant!

We are time (any species), without time wouldn't exist, and humans are stuck in ONE version of one-scale while a fly can move its wings within a day more often than a human being can lie over a lifetime, which is impossible, nothing happens more often than the lying.

But since i understand scales i of course can leave our scale partly to brain-given close scale(s), which is mindnormalizing enough (**mindblowing now mindnormalizing**) - I think i write about Scale-Shift in "Evolution - Imperfect" out of the emotional perspective, not sure, but i remember copy-pasting the giant-scene into my second document to write another scene first, after which i might followed the concept of Evo-Imperfect and jumped to the next event "back to bed", since the now selected scene did the job of what i wanted to tell as well. **So open your eyes and heart for giant Ingo and inform me if you find him.** There is a huge difference between feeling like a giant and actually BEing a giant by scientific scale-shift initiated by intelligence and understanding reality. I come to these experiences by learning, evolving, always save inside my head since its reality, even without scale. So i dont drug myself, i use it for good causes to do more then just theorize and write down the new fundamental-base which will help humanity on many levels toward life in a society as written on page 3 "**my dream of society**". The next love and peace phase in evolution has to take place without drugs, because look at the last drug-phase and where we are standing now!? All the woodstock guys today smartphoners as well, the rest died ignoring all they stood for, watching the world around them turn into this robotic and psychological hell i cant even begin to describe - Wait i can and i will begin to end, in Paper (3) - Evolution Blocker. Unblock, move on, unity is the only drug we need.

**This paper turns into IMPORTANT information by itself... It's close to end. Let's bring in more light!**

## 10. FINAL PIECES - Part 2

**Light Labyrinth-Theorie, Sound, 4+Dimensions? And no, I will not speculate about where the 3D-laws come from but instead I will bring up God.**

### 10.1. Labyrinth-Theorie (LT) - (Light Theory)

**Fasten your seatbelts (again!) - I know you interrupted running around trying to feel like a giant! :D**

**I understood light way after i undertood the Paradox-Perfection or anything, because it's too gapey!**

#### 10.1.1 Story how i got to think about light

1 year ago, in february 2019 i was in the process of writing a book called "The Ironwood Clinic" which, when translated, will be the greatest thriller you can possibly ever read. It was my 11th-book and i found myself screaming of the amounts of endorphines provided by all i brought down to "paper" - i didnt arrive at mount everest of writings peak, i grew wings and flew away. I was living in serverest pain at that time by my health situation, yet the chapters, the ongoing thrill, one chapter more intense then the other, now combined with fundamental reality i worked out in my mind since 2015 yet never started to write down up to to today, this was my grown up masterpiece - written in german advanced language and totally different than my following first english book Evolution-Imperfect, where i returned back down to the everests art way down and felt grounded and happy about it, because its a trick in evolution: change language, "start over", keep it simple "imperfect". However, during that time i thought alot around all sorts of scenes and science and i now could not longer avoid thinking about good-old-gapey light. So i started seeing clearly by closing my eyes and and hit all the empty gaps of understanding until i was suddenly driven to draw a box - I now here chose to be a globe...

### 10.1.2. The LTs "Respect"-Experiment (for the mind or get pencil and paper)

**Imagine or draw:** A globe, inside = total "darkness" (in brackets for a reason but for now it's just the old total darkness). There is a little box attached on the outside globe that can generate an electrical signal and send it through a tiny hole inside the globe. Let's call the signal "RPSP-Contrast-Communicator", aka "Respect" (because "RPSPCC" sounds like the song "R.E.S.P.E.C.T"). So "Respect" is supposed to fly straight through the globe from the entry spot to the opposite side where it could just fly to or be absorbed by technology lenses without brains.

Now we add inside the globe an eye connected to a brain at a random position - I REPEAT: "CONNECTED TO A BRAIN!" - super ultra important to understand light, since no "eye-technology" is connected to a brain (remember "man trying to recreate reality"?). Because every Information not created by nature, everything not live absorbed, are recreated-fake-information-copys bound to limited man-made-inventions and made up "science", never the original sended information, which are absolutely different. Man is trying to understand the limited-fake-copy he always creates). Now "Respect" would be absorbed by the eye+brain while flying straight, so "Respect" miraculously doubled? When i drew this, i suddenly found myself in a small village of 5000, people sitting inside my teenager room, age of 18, playing a computer game, never going to school, while the television - i sadly grew up with running all day long -, was running all day long, sending an episode of "Big Bang Theory". I was sitting with my back turned to it, never payed attention, it was just background noise not to feel so lonely.

12 years later, 2019, i remembered that moment hearing they say something i didnt listen to back then "Doublor Effect!". Yet until today I still dont know what they meant with that since i didnt research it ever - i hate that kind of research, especially about "science". So i had a discovery that digged up a subcionssciously absorbed information of a scientific-based-nerd-series, my brain now created a connection to. And since it seemed a cool connection, i wanted it to be real, so i suddenly shouted out "OMG!" from rush of endorphines of how much my brain ruled again, because... remember the stair to a shiney door of "[how is logic defined?](#)". Now this doubling effect, whoever might discovered it, that is the second step, and "Who wouldnt walk further into the light?" - how great that we are even talking about light in this case. So i walked inside and it blew me away, for a second, then i continued writing and was way more blown away by "The Ironwood Clinic" where i didnt use my new knowledge at all. But at least i took the time to research properly! Of course i gave the Effect i discovered the proper name, sure not Doublor-Effect aka the second-step-name which i dont publish for now to let you try walk a little bit higher up the stairs.

Now you know that the experiment just started at that point when other people get prices, plus I gave you a way too big hint: LABYRINTH THEORY.

Now take your time. If you dont get entirely enlightened you can try again with the following hints, but dont read them for now.

Hints: build the Labyrinth in your mind or on paper, then add more... (hint: rinfinif space-overlay, rinfinif PP)... The labyrinth looked good in my original box-drawing but it will work with the globe the same.

## 10.2. Four and more Dimensions? Time as Dimension?

**Come on! You got this!**

**Just in case not:** "Everything inside the 3d is 3d" Any other dimension "outside" would not be 3-4-5-6-whatever-dimension, because it can only be and it's primitive to speculate about Non-D variations. So if there is any other Dimension it's Non-D that is not existing for us but by mind-trick-logic taught by Paradox-Perfection.

### 10.3. Time = Dimension?

Time is not a dimension as we already know, since base law B01 of the third dimension "Nothing exists", so time doesn't exist in the first place and on top everything in the third dimension is a third dimension, gapey-information included, nothing can escape that, and on top Rinfinitude-Priority-Scale-Principle changes everything time seemed to be, as you now know: scales can make our 13 billions years to a second.

## 10.4. What is Sound?

**In one word:**

**Love**

**In physics:**

**"The-Gapey-(Brain)-Effect"**

We have to skip this, it's too gapey and it was already perfectly described with one word. I only want to add that: there is a big difference in sound-science and sound-production-science.

### 10.4.1. For all the def people, i got good and bad news.

The good news are actually news of a level-of-beatyness i can't form into human words, i can try but i would need to add right here entirely new signs and new letters which would have to be a visual experience unable for the brain to associate with anything ever seen: I am talking about hidden sound-information, kind of like from the scalings hiding, but can't be compared. What i am saying here: sound can be created in the brain, that you can't imagine, as real as in reality, just undescrivable, beyond all we can experience here, not even on drugs you could hear what you can only hear when you are logged into reality... the only way to get there in the brain without risking your life - so that's the bad-news for anybody who doesn't write fundamental reality. You can try, you will never get there by a 100% guarantee. If you would have the intelligence, you would also save humanity with me and we would be family, because you would be another soul... You have all souls, but actually living as a soul is different. A soul does not stop to suffer a single second unless reaching what a soul needs - freedom for ALL OF US, far from selfishness. Freedom for myself is primitive, waste of time, selfish. We are here in the third dimension i described you now with science but there is that other world that is a drug - Which i naturally don't use ever since the first scientific landings to learn, because i chose responsibility, i chose suffering over drug - for all of you. I suffer for you and keep myself the weakest strongest person, while i actually could just escape here every day and listen to sounds you will luckily never hear - Fadesciousness would end your life and your heartbeat. If you can shoot heroin and get back to reality without ever touching it again, then you are strong and still not prepared for a drug you don't have to shoot, just enter for free at any time you like...

I would have that heroin till my last days of a short but timeless life, until i can't escape the

process of metabolisation chainreaction and lacking nutrients starting to destroy my body, because i stoped caring about the hard fight to keep my cronical chainreaction at the point i fought years for to get to - never a second relieved of horror - I am a prisoner in my body, never in my mind! And most live the other way around, not appreciating having metabolisation ballance, food, and drugging anything to be fitter and feel better and less pain on top.

Sound just makes sense to all of this horrible lifelong terror experience with human: I look in the past i see nightmares, i look in the present i feel its even worse, on a new psychological way, especially eversince truth became consume, the powerful are more untouchable, can do whatever they want, there is no right and wrong, anything is right when its presented by a straight face, while the masses are more respectless and ignorant to each other than ever before and if i look in the future i honestly see: me - sourrounded by you. And maybe we will hear entirely new sound even i cant imagine now, a sound of unity that will go out into the third dimension as a message and takes all the fears of any species who actually could visit us by their evolved technology - which i could totally never develope -, because they would be save: there would be no stronger- or weaker species, we would be of course equal and feel the same about survival and supporting each other, create energy and shelter systems for weather-challenges, for the rising oceans, for meteors, and also into the small-direction for micro-technology to cure us from all the little dangers for our healthes. We, the two species would grow healthy food, share, protect our world(s), we would relax and we would not tolerate any being that doesnt support that peace in reality, not only in word (as actual happening: all the contradiction to R E A L I T Y), we would be absolutely radical about beings among us contradictingly using words to stay in power: any being has to live up to word in full or are free to be a quiet powerless part who can enjoy consuming paradise, but never in any position, never any power anywhere, not the slidest bit. Any person taking peace would be killed with joy, we would celebrate taking those out of society. Someone has one chance, be human or be the virus that destroys your sourrounding and we would of course kill that virus as we do with any in our bodys - i never heard anybody feel any regret about "murdering" a virus! It's happyness when the goddamned murder inside the body-system is gone and life can go on. Any being part of society would grow up knowing the instant consequence, gamble with it and you will see - It will be: appreciate paradise or die.

Death of evil viruses would be good for society but never talked about, instantly forgotten: no fame!

While death in general would become a day to celebrate. Death we, the less evolved species only feel so intense because most people lose literally everything because we are not a unity, all alone with just 1-2 in lucky cases 3 family-people. losing one of them means losing a huge part of life and safety. If we all are a big family, then we have a stable web of life in our brains making all of us the super third dimension souls capable of anything!

**Thank you!**

# My Idols:

non-human:

1. Scooby (~6000 km, Rip)

1. Scoobine (~2500 km tbc)

1. WORLDYYYYYYY! (~2km)

human:

**1. Martin Drysch** (Worker, Sportsman)

**2. Wilko Grüning (Cloudy)** (Pro Skater, Musician - RIP)

**3 Alexander Bäder** (Skater)

**4. Marianne Weber**

(My Landlord, without her i would have never made it, living under her roof for 9 years!)

**5. Dr. Till Arnold**

(Saved my life, only doctor didnt pathologize me, found parasites in mid 2015 after i starved 6 months)

**5. Ruediger Kuss**

(Ex heroin-addict today founder of help orginsation for addicts and that-one-homeless-not-fitting-nowhere-system-failure-not-on-drugs)

**6. James Eugene Carrey** (Genius, Evolver)

**7. Jennifer Lawrence** (Cares and acts)

**8. Elissa Steamer**

(Pro Skater, greatest sportswomen on planet just nobody knows:  
putting out skatepart at age 42 ??? I cried!)

**9. Mark Fröhlich**

(Pro Skater, should have been skater of the year 2019! His skateparts represent Skateboarding more then anything out there).

**10. All the Homelesses**

(The only people i am not afraid of! THANK YOU! I will try to get more help for you!)

**10. Everyone who was ever unconditionally good to me, i love you forever!**

**11. Everyone supporting me and my art.**

**And that one person still causing me to start to cry when i am unable to write that list without thinking of mentioning her (Unprivileged, strong).**

*My last wish:*

*Keep VIMOSA alive when i am gone, at the state it then is, forever, never change, it will be an everlasting vaccine.*
